

C4I Capabilities of the Hungarian Defence Forces, Force Development and Procurement Challenges

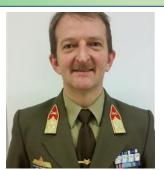

About the speaker

- Artillery officer!
- HDFC Force Development Directorate, Command and Control Systems Development Branch.

- Missions in Kosovo in 2003 and 2017, and in Afghanistan in 2005 and 2006.
- Operations planning background at strategic level.
- Student of the Doctoral School of the National University of Public Service research area is capability development.

- 1. General considerations
- 2. Systems integration framework
- 3. Development of the IT infrastructure of the HDF
- 4. New Procurements

For war we need three things-INTEGRATION, INTEGRATION AND MORE INTEGRATION

...and money of course!!

A challenging environment

- *Zrínyi* programme
- New procurements
- Legacy systems and structures vs. new equipment
- Sometimes old way of thinking on command and control
- Time pressure!
- Same infocommunication configurations to different systems!

Budget considerations

- Strict long and short term planning;
- Project teams contract management;
- Market search;
- Support to HUN industry;
- Close contact to manufacturers.

Key points:

- not revolution but evolution
- FMN, MIP, ASCA
- MC 0640 "Minimum Level of Communication and Information Systems (CIS) Capabilities at Land Tactical Level"
- Simplification (fast deployment, minimum manning)
- Network management!

Systems integration

MoD - HQs

HDF CMD

Main HQ (JOC)

MND-C

Static & Deployable HQ BGE, BN level

CP elements

SQD, PLT, COY level

Fighting vehicle (IFV) (& CP)

Soldier

Digital Soldier

Soldier (intel)

Sensor

Horizontal integration

Vertical integration

Military satellite capability

Tropospheric transmission

Wireless voice & data transfer (microwave/LOS, MIMO-Mesh, laser, WiFi, LiFi (Led))

> Tactical radio (HF, VHF, UHF)

Comm. Centre capability

Combined cable capability

Software systems HUNTACCIS, C4ISR, ACCS, etc.

O&M support, Training, Education **FMN** capability

Spiral 3

Implementing Inf. domains

- Unclassified & Classified domains
- Information Exchange Gateway (Restricted -
- (Static system Deployable FMN based system) (between classified domains)

R&D

- Laser transfer
- Li-Fi
- New waveform
- 3D projecting

Deployable CD

Deployable Network Monitoring

Integration & extension of software

- TC2 C4ISR
- TC2 METEO
- TC2 ACCS (Fire Control System)
- BN HDF CMD IVI

Integration of complex systems

- **NASAMS**
- HELI
- MED (& ROLE2)
- SAMOC

Intercom "Central Intelligent"

- Int. of Interoperable radio
- TC2 communications modul
- Optical receiving interface
- Remote control unit (external)
- Interconnecting to the Comms Centre, tactical router
- Static extension,
- Coop with industrial suppliers.

Hardware integration

- Radio CPs.
- Comm. Centre kits
- Tropospheric, satellite
- Radio families
- Static sytem interconnection
- Implementation/deployment of Main CP (JOC)és CP infrastructure

Digitalis Soldier project

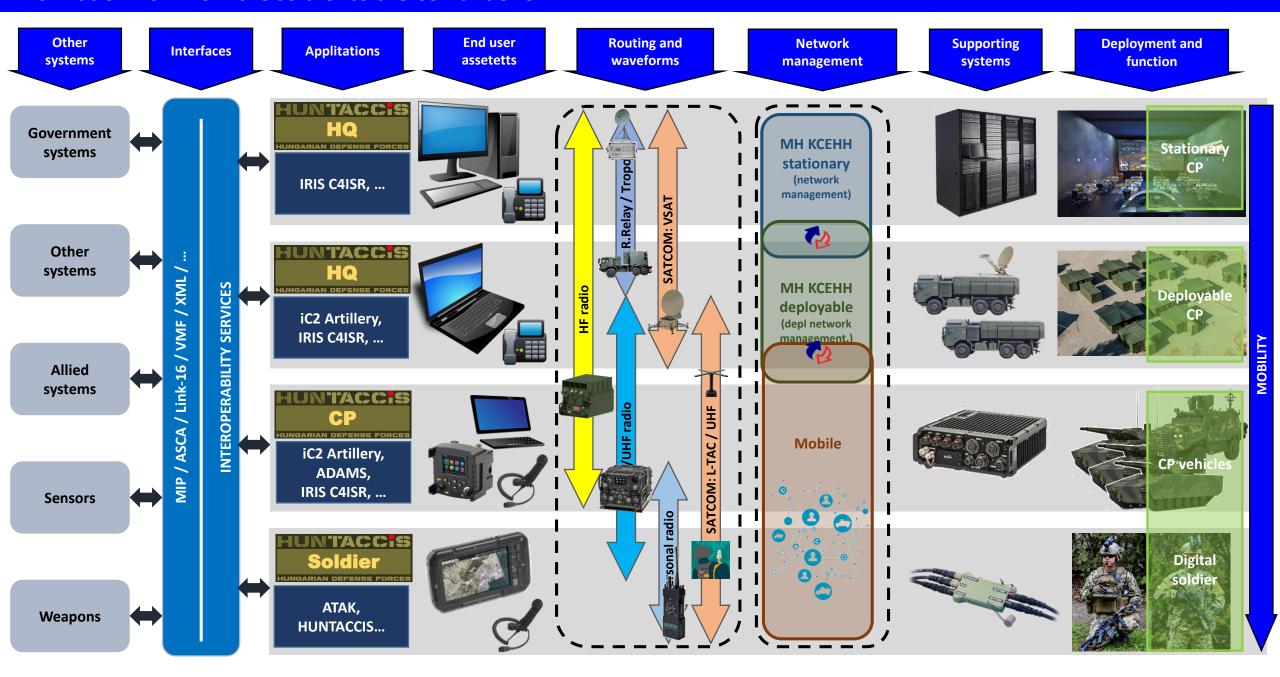

- Int. of sensor signals to the Comms Centre
- TC2 soldier level
- Unified (common) waveform proprietary, for official de offic

Land - Air integration

TC2 - Air C2

Infrastructure of CPs

Information flow from the soldier to the Comander of HDF

Development of HDF IT-Infrastructure

- Static network developement
 - fiber optic network expansion
 - HC-LOS network modernization (radio-relay)
 - telecommunications infrastructure modernization
 - cyber-security
- Deployable CIS capability developement
 - new DCIS centres (PoP) focused on FMN battallion and above
 - new generation IP based radio-family procurement (HF, V/UHF, Intercom, accessories)
 - HC-LOS (radio-relay stations)
 - HC-BLOS (troposcatter, VSAT, L-TAC)
 - deployable fiber optic
 - C2 software improvements and integrations (Air C2; MIP)
 - dismounted soldier

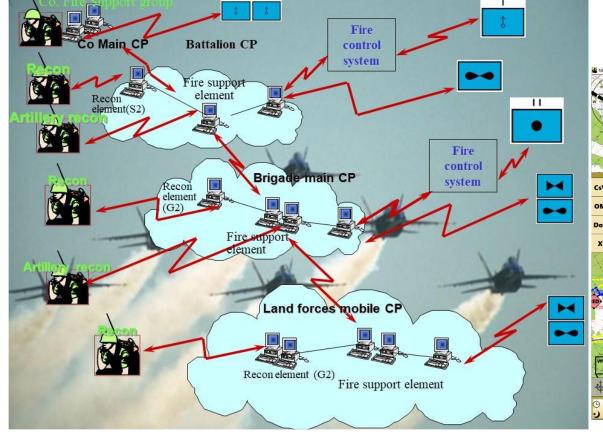

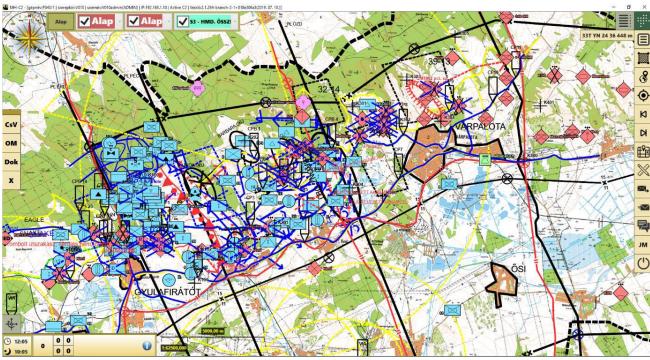

New Procurements - BMS

HUNgarian TActical Command and Control Information
System

New Procurements - tactical radio family

- "R" configurations
- Elbit Systems Deutschland
 - Radios E-Lynx familiy (HF and VHF)
 - dual and single channel
 - INTERCOMs
 - Tactical routers
 - training

- For interoperability
 - Harris

	•			A	
Config code	HF radio (1ch)	V/UHF radio (1ch)	V/UHF radio (2ch)	Interop. V(UHF - Harris AN/PRC-117G + SATCOM	Symbols (used in this presentation)
R-10	-	1	-	-	
R-20	-	-	1	-	
R-30	1	-	1	-	•
R-40	1	-	1	1	
R-50	2	-	1	1	00 1

New Procurements - GPS and TETRA

- GPS sets
 - COLLINS Aerospace NavHub GNSS GPS (SAASM module)

For supporting ops in Hungary (ie. Disaster relief):

Motorola MTM5400

New Procurements - The digital soldier system

Airspace Control Radars

- Fullsize-Multi Mission Radar
- Medium size-Multi Mission Radar
- Passive radars
- LINK-16 Terminal Block Upgrade 2
 - Network management

- 21st century challenges!!
- Interoperability!
- Networks!
- Complexity!
- INTEGRATION!
